

OUR REMARKS

In order to structurally differentiate our claimed invention from the cited prior art Unsworth'080,

“wherein the non-invasively stimulating comprises at least a set of non-invasive electrical stimulation pulses and a set of permanent magnets.” is added to the original claim 1 along with claim 2 also incorporated into the claim 1.

Claim 3 is amended to add in the word “pulses” and with claim 4 incorporated into the same claim wherein the phrase “ and a set of permanent magnets” is also added into claim 3.

Three phrases “ and at least two permanent magnets”, “ and each magnet “ and “ and magnetically” are added to claim 5.

Three phrases “ and permanent magnet”, “ and at least two permanent magnets” and “ and at least two permanent magnets “ were added into claim 6, along with claim 7 being incorporated also into claim 6

Please see Fig. 2, Fig. 3 and the first paragraph [0012] under “ Detailed Description of the Preferred Embodiment “ in the published patent application for the permanent magnet(s) being described and shown. This structure is unique to our invention and differs structurally from the prior art Unsworth'080. The permanent magnet(s) is indeed an important part of our invention and by incorporating this structure into our claims, it should make our claim invention patentably distinguished from the cited prior art.

As such, the applicant requests reconsideration of the referenced application and favorable action be issued.
